E-Mail Solutions

E-Mail Hosting Services from Manage.net

If you are looking for a cost effective e-mail solution that is simple to use and easy to deploy, Manage.net has your answer. Our e-mail solutions include far more features than most standard internet service providers, and are significantly less expensive to deploy than an in-house e-mail system. Take a look at some of the benefits:

Full Virus filtering – All inbound and outbound mail is actively scanned for viruses, with any infected file automatically quarantined at the server instead of reaching your desktop. While desktop virus scanning tools are still recommended, this service essentially stops e-mail virus attacks before they reach your network and cost you money in lost data, productivity, and recovery efforts.

Full Junk-mail filtering – Our mail server platforms use a variety of cutting edge tools to scan all inbound e-mail for spam (unsolicited junk-mail). Over 30 different tests are applied, with several subscription services updating filters hourly. Spam is identified and labeled for easy sorting and deletion according to your preference.

WebMail Interface – Access your mailbox from anywhere in the world via a web-browser! Our easy to use, customizable interface allows you to interact with your mailbox and conveniently stay in touch while on the road or away from the office. Unlike many web interfaces, ours includes a spell checker, personal calendar, mail folders, and many more features. For customers that want to extend their brand or corporate identity to the webmail interface, we can customize backgrounds, welcome messages, logos, and even place rotating banner graphics or custom tag lines.

Web-based administration – Allows an administrator to easily add, delete, or modify e-mail users within your company's domain. No more need to call into tech support for a simple password change or additional account.

Migration – We are experts in smoothly migrating e-mail from your current provider or in-house solution. We will arrange all your domain name modifications and establish accounts and aliases as required. Give us a call and we can discuss your requirements and describe the whole process from start to finish.

Specifications:

E-mail Hosting Services including:
- POP3/SMTP/IMAP4 interface with customer domain(s)
- Up to 20MB storage per mailbox(average, no penalty for occasional peaks)
- Virus and SPAM filtering for all incoming mail
